New note in Single page app

```
     browser                                              server

        |  HTTP POST content https://studies.cs.helsinki.fi/exampleapp/new_note_spa  |
        | ------------------------------------------------------------------------> |
        |                                                                           |
        |  HTML-code[{"message":"note created"}]                                    |
        | <- - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - -  |
        |                                                                           |
```

the code fetch the form element from
the page, adds it to the notes list,
rerenders the note list on the page and
sends the new note to the server

   browser   server
